# Create with a crate

- ❑ From 2003 through to 2006, Waste Converters and the Victorian Woodworking association organised the create with a crate competition. The crates were sourced from the Iveco Truck manufacturing plant in Dandenong.
- ❑ The competition promoted re-using waste timber , in particular packaging waste.
- ❑ Each year Iveco imports hundreds of engines into Australia from America and Europe. Iveco's engines arrive in Australia packaged on large timber pallets. These pallets are made of exotic timber species such as Oak and Elm. Both of these species are widely used in furniture making and woodworking.
- ❑ Often timber packaging ends up in landfill or is pulverised into low-grade mulch as a means of disposal. In Victoria alone, over 500,000 tonnes of timber waste is disposed of each year.
